

The AVUHSD has implemented a new program as part of the health curriculum. The K-16 Bridge Program is an online program designed to help students with college preparedness, career planning, study skills, test-taking strategies, and technical skills. Additionally, students have access to academic support via the Khan Academy tutorial videos.

The K-16 Bridge also provides access to information about higher-education options in California and the requirements for admission to various colleges and universities. The K-16 Bridge also helps students assess their interests as related to various career paths. It is a required part of the health curriculum for first semester.
